## TWIN DISC UNVEILS NEW WEBSITE

Twin Disc, the global leader in marine and land-based power transmission technology, unveils its redesigned website. The Racine, Wisconsin-based company's domain remains [www.twindisc.com](http://www.twindisc.com).

"We want to provide customers a feature-rich interaction with Twin Disc in a digital environment," said Lindsay Schiller, Manager of Global Marketing Communications. "The redesigned website includes improved branding that clearly communicates our strong worldwide presence, excellent global support, extensive product and solutions offerings, and engineering excellence."

Optimized for mobile devices, the new website is simpler to navigate. The company's extensive portfolio can be viewed by market segment, marine or land-based. A clean, clear layout and fresh, modern images add to a more engaging user experience, as does the powerful, enhanced search functionality.

An extensive library of supporting literature, including online drawings, are available for download, as are updated product bulletins. Marine customers can use the Transmission Selector Tool to easily locate the ideal transmission for their specific application, be it a recreational or commercial vessel.
